Let's Start!

This is the future of information systems management

Learning Outcome:

Understand information about relational database management system in spoken or written texts.

Ask your partner:

- What information systems do companies use?
- Should information systems change through time? Why? Why not?

Can Do Statements:

- I can understand written information about trends that will impact information systems.
- I can use terms related to Info Systems new trends.
- I can write a text about trends that will impact information systems in my organization.

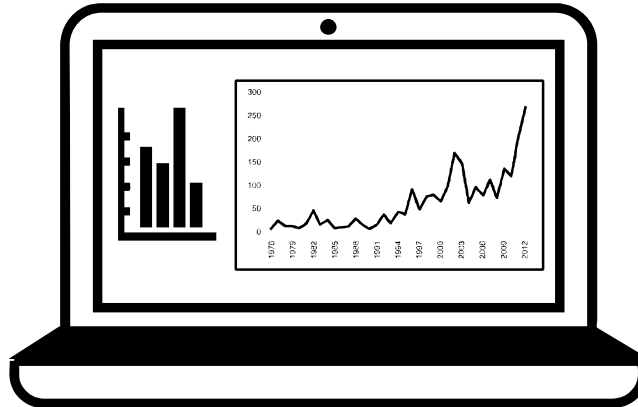

Let's Explore!

The future awaits*!

*"await" is to wait with expectation

Instructions: Read the text below.

Sandy: Everything is changing constantly, especially in our field!

Pearl: Information systems management must change. It is a requirement for companies if they want to survive. I read an article about that.

Sandy: What was the article about?

Pearl: It's an article about trends that will impact information systems. This article should be studied by everybody, including system engineers.

Sandy: What trends do they mention in this article?

Pearl: They mention three trends. The first trend is data collection automation. Intelligence systems should be able to automate data collection. Also, intelligence systems must be implemented by companies to collect information quicker to identify and respond to emerging market opportunities. Information analysis automation is the second trend. Companies will need to implement automated data collection; in fact, big data must be considered a very influential factor in market intelligence activities. Last but not least, the third trend is the cross function integration." Information collection and information analysis programs should be integrated with other organizational functions in the future.

Sandy: Will these trends change information systems management?

Pearl: Indeed, Sandy. The needs of users of information management systems change quickly. Companies will have to adapt to more sophisticated systems that combine all the data collected within their organization. Then, data collection and information analysis must be used to interpret and study, both negative and positive market signals.

Sandy: So, it will help us make better decisions in our company, right?

Pearl: Exactly. We need to use technology to our advantage. There are statistical and modeling tools that we can use taking into consideration the company's specific circumstances and goals to grow. These trends also tell us that the information managements systems will handle more data at a faster speed. So, if we don't do this, our competition will, and we will be left behind.

**Let's Practice!**

Future trends in data collection automation.

Instructions: Write the words to correctly complete the sentences. Use words from the box below. Use: identified by, must be, should be outsourced, should be fed, into practice,

1. Systems to collect information online and in real time _____ implemented by companies.
2. Data _____ into information systems that have built-in features or with best-in-breed automation tools.
3. Ways to ensure the effectiveness and timeliness of the data automation must be put _____ by IT managers.
4. An optimal set of data sources and tools for their organizations, along with an optimal level of human involvement should be _____ IT managers.
5. Management of their entire information source portfolios and the monitoring of news outlets, web blogs and websites sometimes _____ to specialists.

**Let's Practice!**

How companies will have to adapt to changes in systems management.

Instructions: Select the correct answer to complete the sentences.

1. _____ and types of information used for business decision-making will always proliferate and change.
 - a. managers
 - b. sources
 - c. collection
2. Market intelligence systems will need to automate data _____.
 - a. collection
 - b. flexibility
 - c. requirement
3. IT _____ will have to determine the optimal set of data sources and for their organizations.
 - a. flexibility
 - b. systems
 - c. managers
4. When outsourcing, companies will have to make sure they choose a partner that has the _____ to adapt to their evolving requirements.
 - a. data
 - b. flexibility
 - c. business
5. Companies will eventually be forced to integrate systems to serve their different information _____.
 - a. flexibility
 - b. data
 - c. requirements

Extension Activity

More future trends in information system management

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for further information about trends in information system management.
- Choose one aspect you find interesting about the changes in information system management and select the most important aspects.
- Make a poster with the most relevant information you found.
- Present the poster to your classmates.

Self-Assessment

Yes

No

- I look for information about trends in information system management.
- I synthesize information in a poster
- I make a presentation for my classmates.

☐ ☐
☐ ☐

Target Words

- **adapt** (verb): to adjust, to modify to a situation
e.g. Companies will have to adapt to more sophisticated systems that combine all the data collected within their organization.
- **combine** (verb): to connect, to integrate, to associate
e.g. Companies will have to adapt to more sophisticated systems that combine all the data collected within their organization.
- **signal** (noun): indication, authorization
e.g. Data collection and information analysis must be used to interpret and study, both negative and positive market signals.
- **handle** (verb): to manage, to administer
e.g. The information managements systems will handle more data and at a faster speed.
- **left behind** (verb): to abandon, to omit
e.g. We will be left behind.
- **impact** (verb): to influence, to change
e.g. It's an article about trends that will impact information systems.

Learning Points

Passive of Modal Verbs Must and Should

The passive voice is used when we want to emphasize the action (the verb) and the object of a sentence rather than subject.

This means that the subject is either less important than the action itself or that we don't know who or what the subject is.

Here is the grammar structure we use:

Subject + must be/should be + past participle verb form + complement

Subject + should be + past participle verb form + complement

Example: Big data must be studied thoroughly.

Information systems management should be used properly in companies.

Examples

- *This article should be studied by everybody, including system engineers.*
- *Intelligence systems should be able to automate data collection.*

Learning Points

How to write an outline

With an outline you can organize your research and thoughts if you are preparing a novel, a speech a study guide or an essay.

An outline can help you narrow down a specific argument. An outline is composed of two parts:

The first part is planning the outline

- First you choose the topic
- Then you decide what your main goal is, you can persuade a reader, inform a reader or reflect on a personal experience.
- Collect supporting materials and sources
- Choose a type of outline: Topic outline or sentence outline

The second part is writing the outline

- Order main subtopics
- Think of at least two points for each category
- Expand on the points with sub points
- Add layers if necessary
- Conclusion
