Let's Start!

The Importance of Information Systems for Business Effectiveness

Learning Outcome:

Understand information about relational database management system in spoken or written texts.

Ask your partner:

- How do you think the application of information systems can improve an organization's productivity?
- What innovative ways of applying information systems can be implemented in order to make an organization more effective?

Can Do Statements:

- I can talk about the importance of recognizing information systems contribution in business effectiveness.
- I can explore ideas about innovation opportunities.
- I can discuss information about systems and organizational productivity.

Let's Explore!

Information systems play a key role in business effectiveness.

Instructions: Read the text below.

Nowadays, technology is rewriting the rules of competition among companies. Not being aware of the effect that evolving information systems have on companies might lead to unfavorable situations. That is why it is necessary for managers to give importance to the contribution of information systems in business effectiveness. This rapid evolving development in information systems is mainly due to advances in information technology and computing. However, organizations need to implement strategies in order to use information systems wisely, so that there is a significant increase in productivity.

Although automation is one of the most common ways that information systems are applied, it is innovation what really makes organizations competitive. In the scenario of performance indicators, not knowing how successfully the company is may lead to just getting customer satisfaction, and not customer delight. Information systems with marketing analytics capability may provide managers with sufficient customer feedback to develop products or services that go beyond customers' expectations, thus creating a loyal customer base. It is advisable not to overlook the importance of protecting this valuable and sensitive information with information assurance systems, due to the susceptibility of misappropriation.

The application of information systems to routine processes such as sales and cash transactions, payrolls, among others will contribute to the desired organizational productivity and effectiveness. The use of video conferencing, email, and other collaboration software also guarantees an effective execution of an organization's projects or tasks.

On the whole, information systems have become a priority issue for organizations that are looking for innovative strategies to stand out. Organization managers who happen not to be aware of this may eventually make their companies get behind in the highly competitive technology marketplace.

Let's Practice!

e.g. That is why it is necessary for managers to give importance to the contribution of information systems in business effectiveness.

Learning Points

Verb + ing, position of not

The gerund, which is the -ing form of a verb, can be used as the subject of a sentence.

Gerunds can be used as regular nouns. The gerund is a word that ends in **-ing** that is made from a verb. The gerund can be used as the subject of a sentence.

Take a look at the following example:

- **Applying** information systems to improve the organization's productivity is mandatory.

A gerund can be affirmative or **negative**. To make the **negative** form, place **not** before the **-ing** subject:

- **Not realizing** about the importance of information systems may lead to negative consequences

Examples

- *Not being aware of the effect that evolving information systems have on companies might lead to unfavorable situations.*
- *Not knowing how successfully the company is may lead to just getting customer satisfaction, and not customer delight.*

Learning Points

To + verb, position of not

Some verbs are followed specifically by -ing or infinitive forms of the verbs.

Example:

Management **needs to implement** the appropriate information system in the company.

The negative infinitive is made by placing **not** before the **to infinitive**.

Not + To Infinitive

For example:

- The manager is determined **not to ignore** the company's needs in terms of information systems.

Examples

- It is advisable **not to overlook** the importance of protecting this valuable and sensitive information with information assurance systems, due to the susceptibility of misappropriation.
- Organization managers who happen **not to be aware** of this may eventually make their companies get behind in the highly competitive technology marketplace.

Information systems as value add for an organization

The use and development of information systems have changed the rules of competition among organizations.

Information systems are implemented as an organizational strategy in order to achieve a company's short-term and long term goals. The organization environment, management style and organization structure within a business may affect how successful the implementation of an information system is going to be.

The appropriate appliance of information systems can enable an organization to reduce operational costs, improve productivity, create a loyal customer base, etc. thus making it highly competitive and profitable.
