Let's Start!

Information Systems and IT Comparison!

Learning Outcome:

Understand information about relational database management system in spoken or written texts.

Ask your partner:

- What do you know about information systems?
- What do you imagine the difference between information systems and information technology is?

Can Do Statements:

- I can talk about the basic concept of information technology.
- I can explore the basic concept of information systems.
- I can explain the differences between information technology and information systems.

Let's Explore!

Studying for better results!

Instructions: Read the text below.

- David:** Sammy, studying is crucial to pass the exam. We can say that information technology is present in most of our daily life. Whenever we watch a movie or use our mobile cellphone, we are actually using information technology IT.
- Sammy:** Mentioning that is important. Furthermore, I would define it as the integration of the computer with telecommunication equipment. In fact, Storing, retrieving, and manipulating data are essential functions attributed to IT.
- David:** Exactly, according to the ITAA, the process of designing, developing, and implementing computer-based information systems makes part of IT as well.
- Sammy:** Have you ever explored the concept of information systems?
- David:** I read about it, it is a process to produce, distribute and process information thanks to a set of coordinated network components. Information systems can be classified according to the usage of the information; and in business, this can be divided into "operations support system" and "management support system".
- Sammy:** And, have you wondered about the difference between those two?
- David:** I asked the instructor about that during last session. Those differ in origin because books and drawings served as information systems during the pre-mechanical era; therefore, the invention of computers led to consider the origin of information technology.
- Sammy:** Let's check on the web to find out more differences. Ok, information systems have evolved from forms such as manual record keeping to the current storage system, while processors are evolving more and more thanks to IT initiatives as well as the shrinking size of storage devices.
- David:** Listen! Manual books and the famous app TALLY are considered as information systems used by many businesses. This and the way to communicate have been features attributed to information system; take as an example the act of sending an e-mail instead of a letter. On the contrary, IT has been contributing to improve business productivity and manufacturing processes.

**Let's Practice!**

David and Sammy are revising for a test.

Instructions: Proofread the dialogue. Circle and correct the mistakes.

David: Sammy, study is crucial to pass the exam. We can say that information technology is present in most of our daily life. Whenever we watch a movie or use our mobile cellphone, we are actually using information technology IT.

Sammy: Recall the concept, I would define it as the integration of computer with telecommunication equipment.

Store, retrieving, and manipulate data are essential functions attributed to IT.

David: Exactly, according to the ITAA the process of designing, develop and implementing computer-based information systems makes part of IT as well.

**Let's Practice!**

Have you ever explored these concepts?

Instructions: Classify the sentences by writing the number of the sentence in the correct category.

Information Technology	Information Systems

1. It is a process that can be done to produce, distribute, and process information thanks to a set of coordinated network components.
2. It can evidently be found in our daily lives.
3. They can be classified according to the usage of the information.
4. It can be defined as the integration of computer with telecommunication equipment
5. In business, this can be divided into "operations support system" and "management support system".
6. The process of designing, developing, and implementing computer-based information systems can be related to IT.

Extension Activity

What's the difference between IS and IT?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for further details about information systems and information technology.
- Identify the main features of each field.
- Create a comparative chart to contrast the differences between information systems and information technology.
- Make an oral presentation to show your work.

Self-Assessment

Yes

No

- I look for further details about information systems and information technology.
- I identify the main features of each field.
- I create a comparative chart.
- I make an oral presentation to show my work.

☐ ☐
☐ ☐
☐ ☐

Target Words

- operations support system** (noun): referring to information systems generally used by telecommunication service providers
e.g. In business, information systems can be divided into "operations support system" and "management support system".
- pre-mechanical era** (noun): the earliest age of information technology when the first communication processes took place
e.g. Books and drawings served as information systems during the pre-mechanical era.
- TALLY** (noun): software tools useful for enterprises that deal with accounting principles, inventory, and huge amounts of data
e.g. Manual books and the famous app TALLY are considered information systems used by many businesses.
- ITAA** (acronym): stands for Information Technology Association of America a leader group for information technology, it involves most of the world's major IT firms
e.g. According to the ITAA, the process of designing, developing, and implementing computer-based information systems makes part of IT as well.
- current** (adjective): that belongs to the present time
e.g. Information systems have evolved from forms such as manual record keeping to the current storage system.
- shrinking** (adjective): that seems to become smaller
e.g. Processors are evolving more and more thanks to IT initiatives as well as shrinking size of storage devices.

Learning Points

Verbs + ING and To + Verbs

Gerunds (ing) and infinitives (to+verb) are formed after certain verbs and grammar categories.

Gerunds (ing)

USE	EXAMPLE
After certain verbs	<i>I enjoy programming.</i>
After prepositions	<i>Before considering information technology, consider information systems.</i>
As the subject or object of a sentence	<i>Storing huge amounts of data is possible thanks to IT.</i>

'to' + infinitive

USE	EXAMPLE
After certain verbs	<i>We decided to use manual books.</i>
After many adjectives	<i>It's difficult to stop IT advances.</i>
To show purpose	<i>I read about information systems to learn how those are divided.</i>

Examples

- *Recalling the concept, I would define it as the integration of computer with telecommunication equipment.*
- *Storing, retrieving, and manipulating data are essential functions attributed to IT.*
- *The process of designing, developing, and implementing computer-based information systems makes part of IT as well.*
- *This and the way to communicate have been features attributed to information system.*

Learning Points

Future of Information System and Information Technology

The evident growth of information technology during longer than a decade has helped to improve human life. With better information systems, modern information technology has brought remarkable benefits to different cutting edge medicine advances.

On the other hand, information systems have constantly served as a resource for decision making. The sophistication provided by the information technology practices has assigned more and more importance to information systems which are now used in all instances of life.

In conclusion, information technology has become an important tool in handling huge amounts of data and, thus, in distinguishing useful and valuable information.
