Let's Start!

Data Centers and Computer Information Systems

Learning Outcome:

Understand information about relational database management system in spoken or written texts.

Ask your partner:

- Can you explain what a computer based information system is now you that you have a clearer idea of what it is?
- Do you remember what the components of a CBIS are?

Can Do Statements:

- I can say what a computer based information system is.
- I can talk about the different components of a computer based information system.
- I can give characteristics of human resources, hardware and software in computer based information systems.

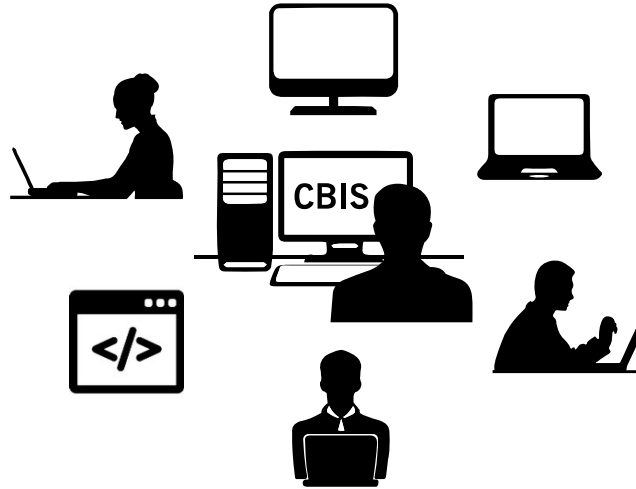

Let's Explore!

Writing a CBIS* Manual

*"CBIS" stands for Computer Based Information System.

Instructions: Read the text below.

A new manual needs to be designed to explain the CBIS. The abbreviation CBIS stands for Computer Based Information System although not many people call it that way. Due to the nature of our business, it is important to understand what CBIS means to our company. A CBIS uses computer technology to carry out certain pieces of work. However, computers are not understood as the only source of hardware used in an information system. Thus, a single computer is not included; in fact, it can even incorporate hundreds of computers, printers, and databases, among other devices to create a system.

In case you wonder about the basic components of information systems, here's some information. We'll start with resources of people where end-users and IS specialists, system analysts, programmers, and data administrators are included. Computer equipment and associate devices, machines and media, which are recognized as hardware, are the next important parts to point at within the components of CBISs. We also need to take into account software, that is, programs and procedures. Last, but not least, we have data and networks. Within data, we are considering data itself and knowledge bases, whereas communications media and network support cannot be left aside from networks.

Each one of these components offers particular characteristics. For example, end users, that is to say, accountants, salespeople, engineers, clerks, customers, or managers, are known as clients. The IS Specialists, on the other hand, are people who develop and operate information systems. Evidently, clients are not included in this group; only systems analysts, programmers, computer operators, and other related IS personnel are taken into account. When it comes to hardware resources, computers and other equipment are used. As for software, physical devices are not taken into consideration, it only considers programs and operating systems. Now, all of this is not written yet, we just have a sketch. I need the design team to put everything in a printed version.

**Let's Practice!****The Concept of CBIS**

Instructions: Chose the correct answer

1. CBIS _____ as a systematized body of data that runs to organize information; it also performs many other tasks.
 - a. is not understood
 - b. is only understood
 - c. is not only understood
2. Computer based information system is abbreviated as CBIS although such abbreviation _____ well-known nor used yet.
 - a. is not
 - b. was not
 - c. was not that
3. All pieces of work _____ by the computer technology needed in CBIS, just certain of them.
 - a. aren't carry out
 - b. aren't carried out
 - c. aren't carrying out
4. Computers _____ be thought as the only source of hardware to be used in information systems.
 - a. are meant to
 - b. aren't meant to
 - c. aren't mean to
5. A single computer _____ the only part for the development of a CBIS. Printers, databases, and many other devices are incorporated into the system structures.
 - a. isn't include as
 - b. isn't including as
 - c. isn't included as

**Let's Practice!****Recognizing simple ideas about CBIS**

Instructions: Match a sentence half from the column on the left with one on the right.

Clients are not included within
End users aren't known
Hardware uses
End users
When talking about software

as IS specialists.
programs and operating systems are considered.
personnel or staff.
resources computers.
are clients.

Extension Activity

I can know more about Computer Based Information System.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about Computer Based Information Systems.
- Create a post with the main characteristics of Computer Based Information System.
- Share with your partners the post you created.

Self-Assessment

Yes

No

- I look for more information about Computer Based Information System.
- I create a post with the main characteristics of Computer Based Information System.
- I share with your partners the post you created.

☐ ☐
☐ ☐
☐ ☐

Target Words

- wonder** (verb): to ask oneself about something
e.g. In case you wonder about the basic components of information systems, here's some information.
- whereas** (conjunction): while on the contrary
e.g. Within data, we are considering data itself and knowledge bases, whereas communications media and network support cannot be left aside from networks.
- sketch** (noun): a simple draft that is not complete or does not have many details
e.g. We just have the sketch; I need the design team to put everything in a printed version.
- due to** (adjective): as a result of something; because of something
e.g. Due to the nature of our business, it is important to understand what CBIS means to our company.
- certain** (determiner): some, particular, or definite, but unnamed or unspecified
e.g. A CBIS uses computer technology to carry out certain pieces of work.

Learning Points

Simple Present Passive in Negative Statements

We use the passive voice when the emphasis within a sentence is on the object rather than on the subject. With this in mind, the verb construction necessarily changes to always having the verb to be preceding the past participle form of the main verb.

Take a look at the following passive voice sentences in the present simple.

D.O. = Direct Object

AFFIRMATIVE

Structure:

D.O. + **am / is / are + verb** (participle form) + complement.

Example:

*Programs **are created** to make customers' lives easier.*

NEGATIVE

Structure:

D.O. + **am not / isn't / aren't + verb** (participle form) + complement.

Example:

*Data centers **aren't designed** for big companies only*

Examples

- *A single computer is not included, it can include even hundreds of computers.*
- *It is not written yet, we just have the sketch.*
- *Communications media and network support are not excluded as a data and network component.*

Learning Points

Components of Information Systems

A computer-based information system (CBIS) uses computer technology to perform some specific tasks.

A computer based information system has basic components. Take a look at the following chart; it gives you detailed information about such components.

Resources of people	People who use an information system or the information it produces (end users and IS specialists, system analysts, programmers, data administrators, etc.)
Hardware	Computers and other equipment along with all data media (physical computer equipment and associate device, machines and media)
Software	All sets of information processing instructions (programs and procedures)
Data	Data and knowledge bases
Networks	Communications media and network support
