Let's Start!

The construction of a model is needed for achieving results.

Learning Outcome:

Understand information about relational database management system in spoken or written texts.

Ask your partner:

- What models can be created to solve information problems at work or college?
- In your opinion, what are the benefits of using communication technologies at work?

Can Do Statements:

- I can talk about the importance of some elements in the design of an information system model.
- I can discuss information about customers, products and services in the design of an information system model.
- I can exchange ideas about business processes and communication technology.

Let's Explore!

Steve is getting some information about information system models from a computer systems professional.

Instructions: Read the text below.

Steve: What am I supposed to do? I can't understand ISM!

Mike: Calm down! Listen to me. An information system model has four elements: customers, business processes, product services, and communication technology. These four elements are the cornerstone of competitiveness today. An edge can be achieved by a company implementing better information systems that bring help in processing information more effectively and efficiently than other rivals.

When technology is inserted in a company, both the company's internal communication (email, chat, etc.) and external communication (websites, and tools like webinar, etc.) can be improved. Thus, the internal data processing for manufacturing, logistics, or finance operations, as well as the channel of communication with the company's customers can be assessed as being more effective. Unquestionably, not only sales but also the solutions offered to customers on their requests show improvement when companies decide to put technology to use. That's why implementing information systems is so important.

Steve: I see, but how can customer and product services be considered an advantage for a company? How are they supposed to help a company?

Mike: An effective ISM is supposed to be designed and developed to meet the needs and expectations of both internal and external clients. This means that data processing should go through different processes before reaching an ending result that is beneficial for internal and external clients. For example, think of a bank that offers internet banking. All banking tasks can be completed by a customer without visiting the bank. This can be considered an effective product service in ISM.

Steve: What about the other two elements?

Mike: A business has many different processes which can be streamlined by adding, changing, or eliminating some steps. Information is key in doing these tasks. More cost-efficient processes mean profits to a business. Of course, all of this can be achieved by taking advantage of new technologies and communication technologies. Are they supposed to bring any benefits? The answer is yes. In fact, we are evidencing that with the inclusion of new technological apps, chats, and dynamic websites.

Let's Practice!

Mike is answering some questions.

Instructions: Use the words from the word bank to complete each sentence.

supposed to be / supposed to consider / to go / are supposed

1. What am I supposed to know about ISM?
You _____ to know that it is designed to meet internal and external client's needs.
2. Why are we _____ customer and product services?
Because they are an advantage for the company.
3. What is data processing supposed _____ through to reach an ending result?
It needs to go through different processes so it can be beneficial for clients.
4. Why is an improvement in the business process _____ necessary?
It is necessary because it impacts business performance directly

Let's Practice!

Mike is reviewing some ideas!

Instructions: Use the word(s) from the box to correctly complete the sentence.

1. An edge _____ be _____ when a _____ has been able to implement better information _____ that allows it process _____ more effectively and efficiently than its _____.

achieved / rivals / systems / information / can / company

2. A company _____ be _____ as a good _____ when it takes into account the 4 elements in the information system model: customers, business _____, product _____ and communication _____. These are the cornerstone of _____ today

technology / services / rival / competitiveness / could / processes / considered

Extension Activity

Let's research!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for more characteristics of customers, business processes, communication, products and services.
- Write a paragraph explaining why they are so important in the design of an information system model.
- Share your paragraph with a partner. Read it aloud.

Self-Assessment

Yes

No

- I search for information about characteristics of customers, business processes, communication, products and services.
- I write a paragraph explaining why they are so important in the design of an information system model.
- I share my paragraph and read it aloud.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **edge** (noun): advantage
e.g. An edge can be achieved by a company implementing better information systems.
- **rival** (noun): a person, group, company, etc., competing against others
e.g. An edge can be achieved by a company implementing better information systems that bring help in processing information more effectively and efficiently than other rivals.
- **data processing** (noun): the conversion of raw input data for the purpose of storing, transforming, rearranging and updating
e.g. The internal data processing for manufacturing, logistics, or finance operations can be assessed as being more effective.
- **banking tasks** (noun): activities relating to money management, money collection and money deposits
e.g. All of the banking tasks can be completed by a customer without visiting the bank.
- **streamline** (verb): to improve the effectiveness of a process, organization or business
e.g. A business has many different processes which can be streamlined by adding, changing, or eliminating some steps.
- **competitiveness** (noun): the ability of a person or organization to compete and achieve wanted or hoped results
e.g. Customers, business processes, product services, and communication technology are the cornerstone of competitiveness today.

Learning Points

Be supposed to in Questions

Be supposed to can be used in a question structure as well as in a sentence structure, either affirmative or negative.

The meaning of **be supposed to** in a question depends on the context the question is used. The contexts are those explained above.

Grammatical structure:

You can use **be supposed to** for both **wh- questions** and **yes/no**. Take a look at the examples below:

Wh + Be + subject + supposed to + verb + complement?

*What **are we supposed to do** about analytics?*

Be + subject + supposed to + verb + complement?

*Are we **supposed to do** any analysis with this financial data?*

As you can recognize from the two examples above, the verb **be** is conjugated depending on the subject it goes with. Another interesting aspect is that you can use the expression **be supposed to** in present and past tenses. In such cases, the verb **be** changes accordingly. Please, take a look at some other examples:

*What **was** Taylor **supposed to do** with the backup information from Farrels Inc. yesterday?*

*Mike, what **is** this new device **supposed to be** used for?*

Meaning:

Now I'd like you to be aware of the meanings the expression **be supposed to** has in the following three questions. Look at the chart.

Be supposed to	
Meaning (Context)	Question example
It's believed, said	<i>I think I've seen this device earlier. What is it supposed to be used for?</i>
It's planned, expected	<i>I've got a question, what time am I supposed to come to the office tomorrow morning?</i>
It's NOT advisable, allowed	<i>Mike tell me. What part of the process aren't you supposed to have access and why?</i>

Examples

- *How are they supposed to help a company?*
- *Are they supposed to bring any benefits?*
- *What am I supposed to do?*

Learning Points

Passive of Modal Verb Can

The **modal verbs can** and **could** combined in a **passive voice form** are used to express present and past ability or possibility when we are NOT interested in stating who does something, but what is done.

Remember that we use **passive** constructions to refer to something that happened without mentioning who did it. The speaker or writer decides it is not necessary to give information about the doer of the action. In relation to the use of the modals **can** and **could**, they express **ability** or **possibility**.

To make a construction using the modal verbs **can/could** in **passive voice**, use the following formula:

Subject + can/could + be + past participle verb + complement

Examples:

*Loss of data **could be produced** due to a hacker attack.*

*An information system **can be improved** if end user requests are carefully considered.*

Affirmative and negative forms are used, too. To use the negative form simply add the word NOT after the modal verb.

Subject + can NOT /could NOT + be + past participle verb + complement

*Loss of data **could not be caused** by internal data mismanagement.*

*An information system **cannot be improved** if end user requests are carelessly considered.*

Examples

- *I see, but how can customer and product services be considered an advantage for a company?*
- *Entire banking tasks can be completed by a customer without visiting the bank.*
- *This can be considered an effective product service in ISM.*
